

Metric Catalog Reference

Version 0.2 - mapped to the actual Prime Levels fields supplied for the project. This is the human-readable companion to the machine-readable metric catalog used by the dashboard, Finance Copilot, and automated Monthly Business Review.

DATA AUDIT		
Observed period	2024-01 through 2026-06	30 monthly periods
Primary fact	subscription_months	19,015 rows
Verified grain	One row per customer_id per period_month	No duplicate customer-months
Metric availability	20 of 20 catalog metrics are derivable	No source gaps for v0.2

ARR vs Average ARR - TTM
As of 2026-06 , Current ARR is \$5.59M while Average ARR - TTM is \$4.66M . They are materially different because ARR grew 50.2% YoY . In this portfolio, a chatbot question using the alias <i>TTM ARR</i> maps to Average ARR - TTM , while <i>ARR</i> maps to Current ARR.

1. Source schema and exact field mapping

The historical revenue model should build from **subscription_months**, not from the current-state **subscriptions.mrr_usd**. Segmentation joins through customer_id and plan_id.

Table	Rows	Fields used by the first portfolio modules
subscription_months	19,015	customer_id, subscription_id, plan_id, period_month, month_start_date, is_active, mrr_usd, previous_mrr_usd, mrr_delta_usd, movement_type, tenure_months, cohort_month
customers	1,200	customer_id, country, region, industry, segment, acquisition_channel, cohort_month, customer_status
plans	10	plan_id, plan_name, tier, billing_interval, list_price_usd, monthly_price_usd, seats_included, extra_seat_price_usd
subscriptions	1,381	subscription_id, customer_id, plan_id, start_date, end_date, subscription_status, billing_interval, discount_pct, contract_term_months, auto_renew
invoices	11,257	invoice_id, customer_id, subscription_id, invoice_month, months_covered, amount_usd, discount_usd, subtotal_usd, tax_usd, total_usd, invoice_status, payment_method, days_to_payment

Supported breakdown dimensions

customers.segment | customers.region | customers.country | customers.industry | customers.acquisition_channel | plans.tier | plans.plan_name | plans.billing_interval | subscription_months.cohort_month | subscription_months.tenure_months

Source check	Result
Customer-month grain unique	PASS
Customer foreign keys valid	PASS
Subscription foreign keys valid	PASS
Plan foreign keys valid	PASS
Invoice customer keys valid	PASS
Invoice subscription keys valid	PASS

2. Executive scale metrics

All six metrics below are available from the supplied ledger. Current ARR and Average ARR - TTM intentionally answer different questions.

Metric	Definition / formula	Exact raw fields	Available	2026-06 sample
Ending MRR ending_mrr	Point-in-time monthly recurring run rate at the selected month end. SUM(subscription_months.mrr_usd) for selected subscription_months.period_month	subscription_months.period_month subscription_months.mrr_usd	YES from 2024-01	\$465.6K
Current ARR current_arr	Annualized point-in-time recurring run rate at the selected month end. 12 * SUM(subscription_months.mrr_usd) for selected period_month	subscription_months.period_month subscription_months.mrr_usd	YES from 2024-01	\$5.59M
Average ARR - TTM avg_ttm_arr	Average of the 12 month-end ARR observations ending in the selected month. AVG(12 * monthly SUM(subscription_months.mrr_usd)) across selected period and prior 11 period_months	subscription_months.period_month subscription_months.mrr_usd	YES from 2024-12	\$4.66M
ARR Growth YoY arr_yoy_growth_pct	Percentage change in Current ARR versus the same month 12 months earlier. (current_arr / current_arr_12_months_prior) - 1	subscription_months.period_month subscription_months.mrr_usd	YES from 2025-01	50.2%
Active Customers active_customers	Distinct customer accounts with positive MRR at the selected month end. COUNT(DISTINCT subscription_months.customer_id WHERE subscription_months.mrr_usd > 0)	subscription_months.period_month subscription_months.customer_id subscription_months.mrr_usd subscription_months.is_active	YES from 2024-01	855
Average ARR per Active Account avg_arr_per_account	Current ARR divided by active customer accounts at the selected month end. current_arr / active_customers	subscription_months.period_month subscription_months.customer_id subscription_months.mrr_usd	YES from 2024-01	\$6.5K

Recommended KPI strip: Current ARR | Average ARR - TTM | ARR Growth YoY | NRR 12M | GRR 12M | Active Customers

3. ARR movement and customer economics

The source already classifies movements using exact values: New, Expansion, Contraction, Churn, Reactivation, and Retained.

Metric	Definition / formula	Exact raw fields	Available	2026-06 sample
New MRR new_mrr	Recurring revenue added during the selected month for rows classified as New by subscription_months.movement_type. SUM(subscription_months.mrr_delta_usd WHERE movement_type = 'New')	subscription_months.period_month subscription_months.movement_type subscription_months.mrr_delta_usd	YES from 2024-01	\$13.4K
Expansion MRR expansion_mrr	Recurring revenue added during the selected month for rows classified as Expansion by subscription_months.movement_type. SUM(subscription_months.mrr_delta_usd WHERE movement_type = 'Expansion')	subscription_months.period_month subscription_months.movement_type subscription_months.mrr_delta_usd	YES from 2024-01	\$9.3K
Reactivation MRR reactivation_mrr	Recurring revenue added during the selected month for rows classified as Reactivation by subscription_months.movement_type. SUM(subscription_months.mrr_delta_usd WHERE movement_type = 'Reactivation')	subscription_months.period_month subscription_months.movement_type subscription_months.mrr_delta_usd	YES from 2024-01	\$573
Contraction MRR contraction_mrr	Recurring revenue lost during the selected month for rows classified as Contraction by subscription_months.movement_type. ABS(SUM(subscription_months.mrr_delta_usd WHERE movement_type = 'Contraction'))	subscription_months.period_month subscription_months.movement_type subscription_months.mrr_delta_usd	YES from 2024-01	\$462
Churned MRR churned_mrr	Recurring revenue lost during the selected month for rows classified as Churn by subscription_months.movement_type. ABS(SUM(subscription_months.mrr_delta_usd WHERE movement_type = 'Churn'))	subscription_months.period_month subscription_months.movement_type subscription_months.mrr_delta_usd	YES from 2024-01	\$7.3K
Average MRR per Active Account avg_mrr_per_account	Ending MRR divided by active customer accounts at the selected month end. ending_mrr / active_customers	subscription_months.period_month subscription_months.customer_id subscription_months.mrr_usd	YES from 2024-01	\$545

ARR bridge control

The monthly bridge reconciles across every observed month. Maximum absolute reconciliation error from floating-point rounding is **\$0.00000000**. This is strong enough to make the ARR waterfall a certified source for both dashboard and MBR commentary.

4. Retention and concentration

Twelve-month retention metrics are available beginning 2025-01 because the source begins in 2024-01. Concentration is available for every observed month.

Metric	Definition / formula	Exact raw fields	Available	2026-06 sample
Net Revenue Retention - 12M nrr_12m	Ending MRR from the accounts active 12 months earlier divided by those accounts' beginning MRR; new accounts after the beginning date are excluded. For beginning cohort where mrr_usd > 0 at period T-12: SUM(mrr_usd at T, default 0 if absent) / SUM(mrr_usd at T-12)	subscription_months.customer_id subscription_months.period_month subscription_months.mrr_usd	YES from 2025-01	115.3%
Gross Revenue Retention - 12M grr_12m	Recurring revenue retained after 12 months from the beginning account cohort, excluding expansion. SUM(MIN(end_mrr, begin_mrr) by beginning customer_id) / SUM(begin_mrr)	subscription_months.customer_id subscription_months.period_month subscription_months.mrr_usd	YES from 2025-01	86.8%
Logo Retention - 12M logo_retention_12m	Share of accounts active 12 months earlier that still have positive MRR at the selected month end. COUNT(beginning customer_id with end_mrr > 0) / COUNT(beginning active customer_id)	subscription_months.customer_id subscription_months.period_month subscription_months.mrr_usd	YES from 2025-01	82.7%
Logo Churn - 12M logo_churn_12m	Share of accounts active 12 months earlier that no longer have positive MRR at the selected month end. 1 - logo_retention_12m	subscription_months.customer_id subscription_months.period_month subscription_months.mrr_usd	YES from 2025-01	17.3%
Top 5 ARR Concentration top_5_arr_concentration	Share of Current ARR attributable to the 5 largest customer accounts at the selected month end. SUM(top 5 customer_id values of 12*mrr_usd) / current_arr	subscription_months.customer_id subscription_months.period_month subscription_months.mrr_usd	YES from 2024-01	7.9%
Top 10 ARR Concentration top_10_arr_concentration	Share of Current ARR attributable to the 10 largest customer accounts at the selected month end. SUM(top 10 customer_id values of 12*mrr_usd) / current_arr	subscription_months.customer_id subscription_months.period_month subscription_months.mrr_usd	YES from 2024-01	13.0%
Top 20 ARR Concentration top_20_arr_concentration	Share of Current ARR attributable to the 20 largest customer accounts at the selected month end. SUM(top 20 customer_id values of 12*mrr_usd) / current_arr	subscription_months.customer_id subscription_months.period_month subscription_months.mrr_usd	YES from 2024-01	20.9%

5. Billing metric and accounting treatment

Metric	Exact treatment
Monthly Billings / Net Invoice Value	Sum <code>invoices.subtotal_usd</code> by <code>invoices.invoice_month</code> . <code>subtotal_usd</code> is the invoice amount after discount and before tax. Keep <code>invoice_status</code> available for separate collections/quality analysis.
Latest sample	\$213.2K for 2026-06
Why it can differ from MRR	Annual and multi-month invoices are issued in lumps, while <code>subscription_months</code> represents a monthly recurring ledger. That makes the difference analytically useful rather than an error.

What the source also enables later

Without adding new synthetic tables, the existing files can later support payment timing/DSO-style analysis (`invoices.days_to_payment`), overdue/failed/refunded invoice monitoring (`invoices.invoice_status`), discount analysis (`subscriptions.discount_pct` and `invoices.discount_usd`), seat expansion (`subscription_months.seats`), cohort analysis (`cohort_month`), acquisition-channel retention (`customers.acquisition_channel`), and plan/billing-interval economics (`plans.tier` / `plans.billing_interval`).

6. Copilot metric behavior

The machine-readable catalog now gives the Copilot explicit aliases and finance-language disambiguation rules.

User phrase	Metric returned	UI label
ARR	current_arr	Current ARR
Current ARR	current_arr	Current ARR
TTM ARR	avg_ttm_arr	Average ARR - TTM
Average TTM ARR	avg_ttm_arr	Average ARR - TTM
Average ARR TTM	avg_ttm_arr	Average ARR - TTM
MRR	ending_mrr	Ending MRR
NRR	nrr_12m	Net Revenue Retention - 12M
GRR	grr_12m	Gross Revenue Retention - 12M
Logo churn	logo_churn_12m	Logo Churn - 12M
Revenue churn	churned_mrr	Churned MRR

Example: "What is our TTM ARR?" -> return Average ARR - TTM: \$4.66M for Jul 2025-Jun 2026. "What is our ARR?" -> return Current ARR: \$5.59M as of Jun 2026.

7. Implementation status and next build step

Item	Status	Next action
Source schema	VERIFIED	Use supplied field names directly in ingestion/schema scripts.
Metric definitions	VERIFIED	Implement certified SQL views.
20 metric availability	VERIFIED	All can be calculated from current data.
ARR bridge	VERIFIED	Add automated reconciliation test.
TTM Average ARR	VERIFIED	Add vw_company_monthly_kpis.avg_ttm_arr.
Dashboard dimensions	VERIFIED	Expose segment, region, country, tier, billing_interval first.
AI aliases	DEFINED	Load metrics_v0.2.json into Finance Copilot router.
MBR output	READY FOR BUILD	Generate from certified views only.

Recommended next step: replace the empty ingestion/schema placeholders in the repo with a DuckDB ingestion script that loads these five CSVs, validates the verified keys/grain, and builds the certified monthly KPI + ARR bridge views.
